Summary

AI/ML Engineer and Python Developer with 2+ year of hands-on experience building and deploying real-world AI systems, including RAG-based conversational assistants and edge AI solutions on NVIDIA Jetson hardware. Skilled in FastAPI, Django, Flask, and modern ML frameworks, with strong full-stack development and scalable backend experience. Passionate about shipping production-ready AI products.

Education

L.J. Institute of Engineering and Technology College

Bachelor of Engineering in Computer Science and Design

Ahmedabad, Gujarat

2021 – 2025

Shree R.A. Patel Boy's Highschool

12th – 74.61%

Surendranagar, Gujarat

2020 – 2021

Key Achievements

- Built and deployed **Lumina**, a production RAG-based AI assistant integrated into a live company product
- Achieved **95% accuracy** in spam detection model using ML and NLP techniques
- Deployed AI inference models on **NVIDIA Jetson** edge devices, enabling real-time on-device processing
- Delivered full-stack **Crate Tracker** system processing real-time data streams in a production environment

Experience

Drytis.ai

AI Engineer

Jan 2026 – Present

Remote

- Working as an AI Engineer, contributing to the design and deployment of production-grade AI systems.
- Designing, building, and optimizing AI/ML pipelines and model integrations for real-world, production-grade applications.
- Developing voice-based AI chatbots and conversational agents, integrating speech, NLP, and LLM pipelines for natural, real-time interactions.
- Building intelligent AI agents and automation workflows to streamline business processes and improve operational efficiency.
- Collaborating with cross-functional teams to build and deploy scalable, production-ready AI solutions.
- Working with LLMs, RAG pipelines, and modern AI/ML frameworks to deliver reliable, high-performance systems.
- Contributing to code quality, testing, and performance optimization across the AI development lifecycle.

Stackyzer Technologies

Software Developer – Python & AI/ML

Nov 2024 – Nov 2025

Ahmedabad, India

- Gained 1 year of hands-on experience in Python & AI/ML-based product development, deployment, and performance optimization.
- Worked on the company's live AI product **FirststepAI**, focusing on model training, image annotation, unit testing, and simulation for high-performance ML integration.
- Developed and maintained the **FirststepAI Server Crate Tracker Website**, including full-stack (frontend and backend) development, real-time data processing workflows, and system monitoring features for tracking crates across the platform.
- Built **Lumina** — an AI-powered conversational assistant capable of natural interactions, document-based RAG (Retrieval-Augmented Generation), and guided user support for navigating and operating the Crate Tracker application.
- Utilized NVIDIA Jetson devices for AI model deployment and real-time inference, improving processing speed on edge hardware.
- Built **Testio** — an internal project for creating online tests via PDF upload, supporting automated management and evaluation.
- Participated in agile sprints, collaborating across teams to deliver stable, scalable Python-based AI/ML solutions.

Projects

Lumina

Made with: *Python, FastAPI, Ollama (Gemma 3.5B), React, FAISS, SQLite, NVIDIA Jetson*

- **Description:** A fully offline, RAG-based AI assistant built to help new employees quickly understand company systems, threshold values, rules, and policies for the FirststepAI Crate Tracker platform, using internal documents as its knowledge source.
- **Features:** Offline document-based RAG retrieval with a FAISS vector database, LoRA fine-tuning for faster and more personalized, domain-specific responses, and full on-device deployment on NVIDIA Jetson for privacy and real-time performance.

Greo

Made with: *FastAPI, Ollama (Qwen 3.8b), LiveKit, React, TypeScript*

- **Description:** Built a conversational AI assistant app AI assistant designed for natural, human-like dialogue, capable of answering open-ended questions, searching the web for real-time information, and controlling home automation through voice commands.
- **Features:** Multi-LLM support for flexible conversation handling, voice interaction with wake-word activation and natural speech responses, real-time web search integration, and persistent conversational memory using ChromaDB and SQLite.

BuzzFlow

Made with: *n8n, LLMs*

- **Description:** An automated trend-analysis tool that aggregates trending topics from Twitter/X, Reddit, YouTube, and news sources every week, using workflow automation to reduce manual research effort.
- **Features:** Automated multi-platform data collection via n8n workflows, LLM-based analysis and summarization of trends, and automatic weekly report generation delivered as a structured file.

Luma

Made with: *React, FastAPI, LangGraph, LangChain, Ollama (Qwen 3), ChromaDB, LiveKit*

- **Description:** A human-like AI customer support agent that provides instant, 24/7 assistance through chat and voice, understanding customer issues, retrieving relevant information from the knowledge base, and performing support actions automatically.
- **Features:** RAG-powered semantic knowledge retrieval, natural voice conversations with seamless chat-to-voice-call escalation, multilingual and context-aware responses, AI tool calling for order tracking, refunds, and ticket creation, plus real-time streaming replies.

Product Demand Prediction

Made with: *ML and Python*

- **Description:** It takes a CSV file as input and works on it, then it gives a prediction value between 0 to 1.
- **Features:** It is used for prediction of product, weather and etc.

Technical Skills

Languages: Python, TypeScript , C, JavaScript, SQL, HTML/CSS

Frameworks: FastAPI, Django, Flask, React, Node.js

AI/ML: scikit-learn, LangChain, Transformers, OpenAI SDK, Gradio, NumPy, pandas, PyTorch, TensorFlow, RAG Flow

Voice & Speech AI: LiveKit, Faster-Whisper.

LLMs: GPT-4o, Claude 3, Phi-2, Gemma 3,Qwen 3.

Automation & Agent Tools: n8n, Zapier.

Databases: PostgreSQL, MongoDB, SQLite

Tools: Git, VS Code, Antigravity, PyCharm, NVIDIA Jetson

Concepts: RAG, LoRA, REST APIs, Real-time Data Processing, ML Model Deployment
