Summary

Highly motivated Computer Engineer with a solid foundation in software development, systems analysis, and database management. Skilled in programming languages such as Java, Python, and C, with experience in developing and debugging applications. Proficient in working with various operating systems and development tools. Demonstrates strong problem-solving abilities and a keen interest in leveraging technology to drive innovation. Eager to contribute to a dynamic team and grow within a forward-thinking organization.

Education

Shree R.A. Patel Boy's Highschool <i>SSC – 79.33%</i>	Surendranagar, Gujarat <i>2009 – 2019</i>
Shree R.A. Patel Boy's Highschool <i>HSC – 74.61%</i>	Surendranagar, Gujarat <i>2019 – 2021</i>
L.J. Institute of Engineering and Technology College <i>Bachelor of Engineering in Computer Science and Design</i>	Ahmedabad, Gujarat <i>2021 – 2025</i>

Experience

Stackyzer Technologies <i>Software Developer – Python & AI/ML</i>	Nov 2024 – Nov 2025 <i>Ahmedabad, India</i>
• Gained 1 year of hands-on experience in Python & AI/ML-based product development, deployment, and performance optimization. • Worked on the company's live AI product FirststepAI, focusing on model training, image annotation, unit testing, and simulation for high-performance ML integration. • Developed and maintained the FirststepAI Server Crate Tracker Website, including full-stack (frontend and backend) development, real-time data processing workflows, and system monitoring features for tracking crates across the platform. • Built Lumina — an AI-powered conversational assistant capable of natural interactions, document-based RAG (Retrieval-Augmented Generation), and guided user support for navigating and operating the Crate Tracker application. • Utilized NVIDIA Jetson devices for AI model deployment and real-time inference, improving processing speed on edge hardware. • Built Testio — an internal project for creating online tests via PDF upload, supporting automated management and evaluation. • Participated in agile sprints, collaborating across teams to deliver stable, scalable Python-based AI/ML solutions.	

Projects

Student Management System

Made with: Python, Scikit-learn

- **Description:** A Student Management System (SMS) using Python typically involves managing various aspects of student information and operations within an educational institution.
- **Features:** It helps university to maintain data of students like students registration, students record, grade and performance tracking, attendance tracking, course enrollment, fees payment etc.

Social Media App / Site (Instagram)

Made with: HTML, CSS, JavaScript

- **Description:** Creating a social media site with features similar to Instagram involves several components.
- **Features:** It has Features such as User Authentication, profile Management, Home Profile, Post Creation, Like and Comments, Search and Filters, Messaging, Notification and others.

Finance Tracker

Made with: Python and GUI

- **Description:** A finance tracker using Python is a software application that helps users manage their personal or business finances by tracking income, expenses, and budgets.

- **Features:** It has Features such as Transaction, Budgeting, Expense Categorization, Financial Reporting and etc.

Product Demand Prediction

Made with: ML and Python

- **Description:** It takes a CSV file as input and works on it, then it gives a prediction value between 0 to 1.
- **Features:** It is used for prediction of product, weather and etc.

Voice Assistance

Made with: AI and Python

- **Description:** A voice assistant using Python is a software application that uses speech recognition and natural language processing (NLP) to understand voice commands and perform tasks. It takes voice as input and then performs the user's command.
- **Features:**
 1. Speech Recognition: Convert spoken words to text
 2. Natural Language Processing (NLP): Interpret and understand text
 3. Intent Identification: Determine the user's intent (e.g., play music, set alarm)
 4. Entity Recognition: Extract specific information (e.g., song title, time)
 5. Task Execution: Perform tasks based on user's intent and entities
 6. Voice Response: Respond to user with synthesized voice

Spam Email and Message Detection

Made with: Python, Scikit-learn

- **Description:** Developed an email filtering solution using Python for spam detection, employing advanced machine learning algorithms and natural language processing.
- **Features:** Achieved an accuracy rate of 95% through the implementation of a sophisticated machine learning model.

Certifications

C For Everyone: Programming University of California, Santa Cruz	Feb 23, 2022 – Coursera
• Grade: 100	
Data Structures University of California San Diego	Aug 21, 2022 – Coursera
• Grade: 95	
HTML, CSS, and Javascript for Web Development Johns Hopkins University	Jan 27, 2023 – Coursera
• Grade: 100	
Exploratory Data Analysis for Machine Learning IBM	Aug 7, 2023 – Coursera
• Grade: 80	
Algorithmic Thinking (Part 1) Rice University	Jan 3, 2024 – Coursera
• Grade: 97	
Algorithmic Thinking (Part 2) Rice University	Jan 3, 2024 – Coursera
• Grade: 100	
Back-End Development with .NET Microsoft	Apr 8, 2025 – Coursera
• Grade: 100	
Ethical Hacking Essentials (EHE) EC-Council	Feb 19, 2025 – Coursera
• Grade: 100	

Technical Skills

Languages: Java, Python, C, SQL (Postgres, SQLite), NoSQL (MongoDB), JavaScript, HTML/CSS

Frameworks: Django, Flask, FastAPI, React, Node.js, WordPress, Framer, Shopify

Developer Tools: Git, VS Code, Visual Studio, PyCharm, IntelliJ

Libraries: pandas, NumPy, Matplotlib, scikit-learn, LangChain, Transformers, OpenAI, Gradio, Streamlit, Flask-SocketIO

LLMs: GPT-4o, Claude 3, Phi-2, Gemma3
